*PC160 portable green screen with LT200 lighting truss*

## Portable Green Screens and Lighting Truss

Pro Cyc's newest product is the **Portable Green Screen**. Available in widths of 80 inches (**PC80**) and 160 inches (**PC160**) and 24 feet in length, the portable green screen is the perfect solution for those who have limited time and/or space to set up a professional quality green screen studio. An entire unit can be set up in 30-60 min or less and can be easily transported between studios or for shooting on location. Each portable green screen comes with customized American Grip stands that adjust from 6-ft. up to nearly 11-ft. high. By utilizing our unique Pro Matte™ Virtual Green Studio Flooring as the background and floor, we are able to provide an entirely seamless, professional grade sweep that is light-weight, durable and can be easily cleaned and reused over and over.

Also available for use with the Portable Green Screens is our new Pro Cyc **Portable Lighting Truss** for hanging video lights to light your green screen (lights not included).
