

Pro Cyc System Super 1.5EZ and Super 1.5QS

- System Super 1.5QS Free-Standing
- System Super 1.5EZ Built-In

“18 / 24” Radius

Both System Super 1.5EZ™ and Super 1.5QS™ feature the unique combination of an 18 in. vertical and 24 in. horizontal radius. This makes them easier to light and minimizes sound reflectance in the corners.

Expanded Corner

Both systems are now available with an expanded corner, enabling more advanced studio configurations.

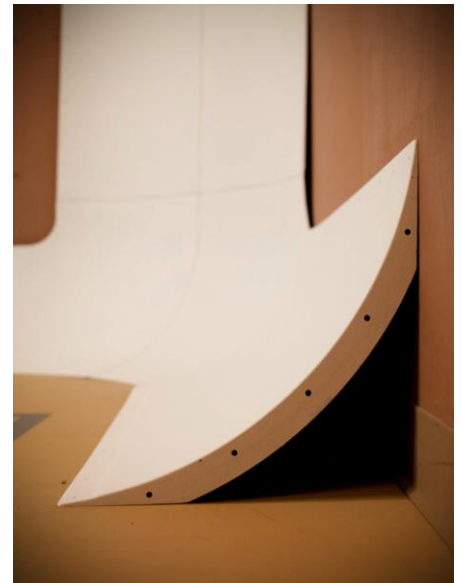

ABS Durability

The new 1.5 systems are now made from the same high impact, lightweight ABS plastic that were previously only available with our larger systems. They are easier to install and much less costly to ship than ever before, making them an ideal solution for international installations where space and shipping costs are a factor.

Super 1.5QS free-standing system installed with Pro Matte™ flooring

Responding to the growing demand for high quality cyclorama systems in smaller spaces, Pro Cyc, the world leader in modular cycs, announces the release of two **18-inch radius** cove systems. Designed to provide an exceptional seamless cove solution while maximizing available floor space for those areas where space is limited, **System Super 1.5EZ** (builds into existing sheetrock walls) and **System Super 1.5QS** (completely free-standing) are expertly engineered to provide the quality and ingenuity our clients expect.
