

5 Things We Need to Know

In order for us to recommend the best Pro Cyc system for your studio and to give you an accurate, Free No Obligation Quote, please answer the following 5 questions:

1. **Built-In or Freestanding:** Can your Cyc be built into existing Sheetrock walls (least expensive), or do you need it to be completely freestanding? (Note: we also offer hybrid solutions that combine both Freestanding and Built-in components)
2. **“Shape” of Your Studio:** How many walls will your studio have?
 - One Wall = “Straight Wall”
 - Two Walls w/ One Corner = “L-Shape”
 - Three Walls w/ Two Corners = “U-Shape”
3. **Cove Radius:** What size cove radius do you want? (Cove Radius = the amount of space needed to transition from your vertical wall to the floor). Pro Cyc offers modules with 18, 30, 42, and 60 inch cove radiuses.
4. **Wall Lengths and Height:** Starting from the corner(s) of your studio, how long will each wall be, and how high do you want the walls of your studio?
5. **Flooring:** Do you want your studio to have a painted floor (less upfront expense but will require frequent repainting), or do you want to use Pro Cyc’s Matte™ Virtual Green™ Chroma Key Flooring material, which can be cleaned after each use?
